AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as membrane), inflammations, collitis, and Candida infections memoral membrane), inflammations and/or tumours. The peptides can also be used as preservatives. In food sutfas such as infant formula food. The peptides are also in function have have an also be used as preservatives. Even though native human lactoferrin have been shown to have desired anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammatory anti-inflammator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; lactoferrin; modification; infection; inflammation; tumour; food; infant formula; anti-inflammatory; anti-microbial; anti-tumour; urinary tract infection; colitis; Candida infection; fungicidal; bactericidal; preservative.
                        New peptides used for treatment and prevention of infections, inflammations and tumors and for use in infant formula food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               93.8%; Score 60; DB 21; Length 12; 91.7%; Pred. lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, colitis, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives. Even though native human lactoferrin have been shown to have desired anti-linflammatory anti-linfectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as uninary tract infections, colitis, and candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also Human; lactoferrin; modification; infection; inflammation; tumour; food; infant formula; anti-inflammatory; anti-microbial; anti-tumour; urinary tract infection; colitis; Candida infection; fungicidal; bactericidal; preservative. ```
ANY8001 to AAY8100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, colitis, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives. Even though native human lactoferrin have been shown to have deaixed anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore provision of peptides based on lactoferrin and costs.
                                                                                                                                                                                                                                                                                                                                          Human; lactoferrin; modification; infection; inflammation; tumour;

```
AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, colitis, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Byen though native human lactoferrin have been shown to have desired anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower
                                                                                                                                                                                                                                       food; infant formula, anti-inflammatory; anti-microbial; anti-tumour; urinary tract infection; colitis; Candida infection; fungicidal; bactericidal; preservative.

```
AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through hading to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, and/or prevention of infection on a mucosal curhary tract infections and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides can also be used of infection and may also be used as preservatives. The peptides can also be used and the number of infection and may also be used as preservatives. The peptides can also be used and intitutely on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      78.1%; Score 50; DB 21; Length 12; 83.3%; Pred. AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, colitis, and candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used as preservatives. In food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives. Even though native human lactoferrin have been shown to have desired canti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower

RESULT 9 AAY78038

AAY78038 standard; Peptide; 12 AA.

Human lactoferrin derived peptide SEQ ID NO:38. (first entry) 25-APR-2000 AAY78038;

Human; lactoferrin; modification; infection; inflammation; tumour; food; infact formula; anti-inflammatory; anti-microbial; anti-tumou urinary tract infection; colitis; Candida infection; fungicidal; bactericidal; preservative.

Homo sapiens

ö AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, colitis, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives.

Even though native human lactoferrin have been shown to have desired anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower Gaps ; 0 Score 48; DB 21; Length 12; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as membrane), inflammations and/or prevention of infections on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food suffs such as infant formula food. The peptides are also fungacidal and bactericidal and may also be used as preservatives. Even though native human lactoferrin have been shown to have desired anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower

AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through the circulation. A medicinal product of the peptide or fragment through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as uninary tract infections, colitis, and Candida infections (such as membrane), inflammations and/or tumours. The peptides can also be used to suffect a infammation and may also be used as preservatives. Even though native human lactoferrin have been shown to have desired anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, lactoferrin; modification; infection; inflammation; tumour; food; infant formula, anti-inflammatory; anti-microbial; anti-tumour; uxinary tract infection; colitis; Candida infection; fungicidal;

AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as membrane) infections, collitis, and Candida infection on a mucosal membrane) inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives.

AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, colitis, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives.
             membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives. Byen though native human lactoferrin have been shown to have desired anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Even though native human lactoferrin have been shown to have desired anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production

AAY78001 to AAY78100 represent peptides having sequences based on human lactoferrin. The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as urinary tract infections, collits, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives. Even though native human lactoferrin have been shown to have desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anti-inflammatory anti-infectious and anti-tumoural properties they cannot be used clinically on a broad basis because of high production costs. Therefore, provision of peptides based on lactoferrin would enable them to be used for the same purposes as lactoferrin at lower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; lactoferrin; modification; infection; inflammation; tumour;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

15-07-755-161A-10

Sequence 10, Application US/07755161A

Patent No. 5304633

GENERAL INFORMATION:

APPLICANT: Mamoru TOMITA et al.

TITLE OF INVENTION: Antimicrobial Peptides and an TITLE OF INVENTION: Antimicrobial Agent

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSEE: Wenderoth, Lind & Ponack

STREET: 805 Fifteenth Street, N.W., #700

CITY: Washington

CITY: D.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STATE: D.C.

Sequence 2235, Application US/09878178

Patent No. US200177552A1

GENERAL INFORMATION:

APPLICANT: Jiang, Yuqiu

APPLICANT: Jiang, Yuqiu

APPLICANT: Secrief, Heather

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: COMPOSITIONS OF COLON CANCER

FILE REPERENCE: 210121.527

CURRENT FILING DATE: 2001-06-08

NUMBER OF SEQ ID NOS: 2237

SOFTWARE FatESQ for Windows Version 4.0

Alternate names: protein T32M21.200
Species: Arabidopsis thaliana (mouse-ear cress)
Date: 20-Apr-2000 #sequence_revision 20-Apr-2000 #text_change 20-Apr-2000
Accession: T48456
Bevan, M.; Terryn, N.; Ardiles, W.; Buysshaert, C.; Dasseville, R.; De Clerck, R.; De "es, H.W.; Rude & S.; Lemcke, K.; Mayer, K.F.X.
Demitted to the Protein Sequence Database, March 2000
Reference number: 22448?
                                                                                                                         Accession: T40568
Wood, V.; Rajandream, M.A.; Barrell, B.G.; Davis, P.; Churcher, C.M.

corneal dystrophy): exclusion of linkage to lactoferrin gene.;
Mol. Vision 4:31-32(1998).
-!- FUNCTION: TRANSFERRINS ARE IRON BINDING TRANSPORT PROTEINS WHICH
CAN BIND TWO ATOMS OF FERRIC IRON IN ASSOCIATION WITH THE BINDING
OF AN ANION, USUALLY BICABONATE.
-!- FUNCTION: LACTOFERROXIN A, B AND C HAVE OPIOID ANTAGONIST
ACTIVITY: LACTOFERROXIN A SHOWS PREFERENCE FOR MU-RECEPTORS, WHILE
LACTOFERROXIN B AND C HAVE SOMEWHAT HIGHER DEGREES OF PREFERENCE
LACTOFERROXIN B AND C HAVE SOMEWHAT HIGHER DEGREES OF PREFERENCE
                                                                                                                                                                                                                                                                                                                  MEDLINE-91166929; PubMed=1369293;

Provintal rearrangements and overexpression of a new cellular gene (nov) in myeloblastosis-associated virus type 1-induced nephroblastosis-associated virus type 1-induced nephroblastosis-associated virus type 1-induced nephroblastosis-associated virus type 1-induced nephroblastosis-associated virus type 1-induced nephroblastosis.

-i- FUNCTION: IMMEDIATE-EARLY PROTEIN LIKELY TO PLAY A ROLE IN CELL GROWTH REGULATION. ITS OVEREXPRESSION IS ASSOCIATED WITH TUMORIGENESIS AND EXPRESSION OF A N-TERMINAL-TRUNCATED VERSION OF NOV GENE IN CHICKEN BMBRYONIC FIBROBLASTS (CBF) IS SUFFICIENT TO INDUCE THE TRANSPORMATION OF CEF IN VITRO.

-i- TISSUE SPECIFICITY: BRAIN AND HEART, AND AT A LOWER LEVEL IN MUSCLE AND INTESTINE, IN THE EMBRYO, LUNG AND LESS SO IN BRAIN AND SPLEEN, IN ADULT CHICKEN.

-i- DEVELOPMENTAL STAGE: MAVI-INDUCED NEPHROBLASTOWAS EXPRESS A HIGH ADULT KIDNEY.

SUZUKI K., Takahashi M., Imamura S., Ishikawa T.;
Submitted (XXX.1992) to the EMBL/GenBank/DBU databases.
-!- CATALYTIC ACTIVITY. Urea + H(2)O = CO(2) + 2 NH(3).
-!- COFACTOR: Binds 2 nickel ions per subunit (By similarity).
-!- SUBUNIT: (ALPHA, BETA, GAMMA)(3) (BY SIMILARITY).
-!- PTM: Lys-22 is carbamylated. The carbamcyl group provides the ligands for the two nickel ions (By similarity).
-!- SIMILARITY: BELONGS TO THE UREASE FAMILY.
                                                                                                                                                                  .) (POTENTIAL)

-!- FUNCTION: TRANSFERRINS ARE IRON BINDING TRANSPORT PROTEINS WHICH
CAN BIND TWO AFONS OF FERRIC IRON IN ASSOCIATION WITH THE BINDING
OF AN ANION, USUALLY BICARBONATE (BY SIMILARITY).
-!- SUBGELLUAR LOCATION: Secreted.
-!- DOMAIN: COMPOSED OF TWO HOMOLOGOUS DOMAINS.
-!- SIMILARITY: BELONGS TO THE TRANSFERRIN FAMILY.
                                                                                                                                                                                                                                                                                                              Gaps

J. Cell Biol. 118:1511-1522(1992).

-I- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.

THEY PREPERRATIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS, CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES. THIS CADHERIN MAY PLAY A IMPORTANT ROLE IN RENOTHELIAL CELL BIOLOGY TRROUGH CONTROL OF THE COHESION AND ORGANIZATION OF THE INTERCELLULAR JUNCTIONS. IT ASSOCIATES WITH ALPHA-CAPTENIN FORMING A LINK TO THE CYTOSKELETON.

CHESION AND PROBABLY AT CELL-MATRIX BOUNDARIES.

CHESION SPECIFICITY: RUDOTHELIAL INSUES AND BRAIN.

CHESION SPECIFICITY: RUDOTHELIAL INSUES AND BRAIN.

CHESION SPECIFICITY: CONTAINS 5 CADHERIN DOMAINS.
